

Client Story

Client: Ellington Valley Technologies, Inc. (EVT, Inc.)

Project: Create new corporate identity for EVT, Inc., design website and product logos.

I was contracted by the founding partners of EVT, Inc. to develop a visual identity for their new venture. This is the third enterprise that I have worked on for this successful group of innovators. EVT is developing game changing technology for the "source testing" and "emissions monitoring" industry.

A screenshot of the Ellington Valley Technologies website. The header features the company logo on the left and navigation links for "About", "Innovations", "Team", and "Contact" on the right. The main banner has a dark purple background with a digital grid and data points (0.45, 0.67, 0.78). It contains the text "Leading the Revolution in Sample Conditioning Technologies" and "Stationary Source Testing and Continuous Emissions Monitoring made simple and more affordable", with a "Learn more" button. Below the banner, a section with the heading "We keep our cool while others get heated" and the subtext "Innovating the next-generation of sample conditioners" includes a paragraph about the company's technology and a "Learn more" button.
